 Additional information: 	For the wording of the listed hazard phrases refer to section 16.	
SECTION 4: First aid measu	Ires	
 <u>4.1 Description of first aid r</u> 	neasures	
 General information: 	Take affected persons out into the fresh air.	

	Position and transport stably in side position. Immediately remove any clothing soiled by the product.
	Symptoms of poisoning may even occur after several hours; therefore medical observation for at least 48 hours after the accident.
· After inhalation:	Supply fresh air. If required, provide artificial respiration. Keep patient warm.
	Consult doctor if symptoms persist. In case of unconsciousness place patient stably in side position for
	transportation.
<u>After skin contact:</u>	If skin irritation continues, consult a doctor.
	Immediately wash with water and soap and rinse thoroughly.
<u>After eye contact:</u>	Rinse opened eye for several minutes under running water. If symptoms persist, consult a doctor.
After swallowing:	If symptoms persist consult doctor.
• 4.2 Most important symptoms	
and effects, both acute and	
delayed	Headache
	Breathing difficulty
	Profuse sweating
	Dizziness
	Dizziness
	Nausea
	Coughing
Information for doctor:	With reference to section 2 the formulation contains styrene in the indicated mass concentration range. Styrene fumes will preferably be incorporated by
	inhalation via respiratory tract, skin resorption is currently considered as an
	inferior way of incorporation. In case of inhalation styrene is absorbed in a 60-
	90% range. Distribution in organism occurs rapidly, the maximum blood
	concentration can be analyzed after one hour after incorporation. Styrene
	exposition affects skin, mucous membranes, and central nervous system (CNS).
	Acute damages / risks to health:
	In case of styrene poisoning mainly damages to and interactions with central
	nervous system (CNS) arise. In concentration ranges above 200 ml/m3
	symptoms such as fatigue, nausea, imbalance and prolonged response times
	(Contd. on page 4)

Printing date 22.08.2017

Revision: 22.08.2017

Waterclear	
	(Contd. of page
	are observed.
	Chronical health risks:
	Effects at central and peripheral nervous system and respiratory tract a
	evident in literature.
	Main health risks are:
	- prolonged response times
	- reduced cognitive performance, partial amnesia
	- retardation of nervous impulse transition speed
	- disturbances of pulmonary function
Hazards	Danger of impaired breathing.
	Skin contact with polyester and epoxy resin solutions as ingredient of t
	product should be avoided due to risks of skin irritations or allergic sl
	appearances. If occasional hand contact can not be avoided, protection glove
	proper protection ointments and protective agents generating a protective lay
	on the skin were applied.
4.3 Indication of any immediate	
medical attention and special	
treatment needed	If swallowed, gastric irrigation with added, activated carbon.
	If swallowed or in case of vomiting, danger of entering the lungs.
	in owner of in ouce of verning, duriger of entering the fullge.
SECTION 5: Firefighting measure	es
5.1 Extinguishing media	
Suitable extinguishing agents:	CO2, powder or water spray. Fight larger fires with water spray or alcol
Canable oxingaloring agonto.	resistant foam.
For safety reasons unsuitable	
extinguishing agents:	Water with full jet
5.2 Special hazards arising from	Formation of taxia gappa is possible during beating as in second fire
the substance or mixture	Formation of toxic gases is possible during heating or in case of fire.
	In case of fire, the following can be released:
	Carbon monoxide (CO)
	Under certain fire conditions, traces of other toxic gases cannot be excluded.
5.3 Advice for firefighters	
Protective equipment:	Wear self-contained respiratory protective device.
	Do not inhale explosion gases or combustion gases.
	Wear fully protective suit.
	Mount respiratory protective device.
Additional information	Dispose of fire debris and contaminated fire fighting water in accordance w
	official regulations.
	Collect contaminated fire fighting water separately. It must not enter the sewa
	system.
SECTION 6: Accidental release n	neasures
6.1 Personal precautions, protective equipment and	
emergency procedures	Ensure adequate ventilation
energency procedures	Keep away from ignition sources.
	Use respiratory protective device against the effects of fumes/dust/aerosol.
	Wear protective equipment. Keep unprotected persons away.
6.2 Environmental precautions:	Do not allow product to reach sewage system or any water course.
	Inform respective authorities in case of seepage into water course or sewa
	system.
	Do not allow to enter sewers/ surface or ground water.
	(Contd. on page

 6.3 Methods and material for containment and cleaning up: Dispose of the material collected according to regulations. Absorb with liquid-binding material (sand, diatomite, acid binders, univ binders, sawdust). 6.4 Reference to other sections See Section 7 for information on personal protection equipment. See Section 7 for information on personal protection equipment. See Section 8 for information on personal protection equipment. See Section 13 for disposal information. 5.7.1 Precautions for safe handling Keep receptacles tightly sealed. Store in cool, dry place in tightly closed receptacles. Keep away from heat and direct sunlight. Ensure good interior ventilation, especially at floor level. (Fumes are he than air). Use only in well ventilated areas. Ensure good ventilation/exhaustion at the workplace. Information about fire - and explosion protection: Fumes can combine with air to form an explosive mixture. Keep ignition sources away - Do not smoke. Protect against electrostatic charges. 7.2 Conditions for safe storage, including any incompatibilities Store only in well ventilated areas. Ensure good in the original receptacle. Prevent any seepage into the ground. Frevent any seepage into the ground. information about storage in one common storage facility: Store oway from toxisting agents. Store away from toxisting agents. Store away from toxisting. 	Protective gloves
	The glove material has to be impermeable and resistant to t
	product/ the substance/ the preparation.
	Due to missing tests no recommendation to the glove material can
	given for the product/ the preparation/ the chemical mixture.
	Selection of the glove material on consideration of the penetrati
	times, rates of diffusion and the degradation
 Material of gloves 	Fluorocarbon rubber (Viton)
	The selection of the suitable gloves does not only depend on the material, I
	also on further marks of quality and varies from manufacturer to manufactur
	As the product is a preparation of several substances, the resistance of
	glove material can not be calculated in advance and has therefore to be check
	prior to the application.
Penetration time of glove material	Value for the permeation: Level \leq 6, 480 min
	The exact break trough time has to be found out by the manufacturer of
	protective gloves and has to be observed.
• For the permanent contact gloves	protocirto gioreo ana nao to so oscorroa.
