| Additional information: | For the wording of the listed hazard phrases refer to section 16. | |

SECTION 4: First aid measures

· 4.1 Description of first aid measures

| General information: | Take affected persons out into the fresh air. |
|--|---|
| | Position and transport stably in side position. |
| | Immediately remove any clothing soiled by the product. |
| | Symptoms of poisoning may even occur after several hours; therefore medical |
| | observation for at least 48 hours after the accident. |
| <u>After inhalation:</u> | Supply fresh air. If required, provide artificial respiration. Keep patient warm. |
| | Consult doctor if symptoms persist. |
| | In case of unconsciousness place patient stably in side position for |
| | transportation. |
| <u>After skin contact:</u> | If skin irritation continues, consult a doctor. |
| | Immediately wash with water and soap and rinse thoroughly. |
| <u>After eye contact:</u> | Rinse opened eye for several minutes under running water. If symptoms persist, consult a doctor. |
| After swallowing: | A person vomiting while laying on their back should be turned onto their side. |
| <u>4.2 Most important symptoms</u> | |
| and effects, both acute and | |
| delayed | Nausea |
| | Dizziness |
| | Headache |
| | Breathing difficulty |
| | Dizziness |
| Information for doctor: | With reference to section 2 the formulation contains styrene in the indicated mass concentration range. Styrene fumes will preferably be incorporated by inhalation via respiratory tract, skin resorption is currently considered as an inferior way of incorporation. In case of inhalation styrene is absorbed in a 60-90% range. Distribution in organism occurs rapidly, the maximum blood concentration can be analyzed after one hour after incorporation. Styrene exposition affects skin, mucous membranes, and central nervous system (CNS). Acute damages / risks to health: |
| | In case of styrene poisoning mainly damages to and interactions with central nervous system (CNS) arise. In concentration ranges above 200 ml/m3 symptoms such as fatigue, nausea, imbalance and prolonged response times are observed. Chronical health risks: |
| | Effects at central and peripheral nervous system and respiratory tract are evident in literature. Main health risks are: - prolonged response times |
| | - reduced cognitive performance, partial amnesia |
| | - retardation of nervous impulse transition speed |
| | - disturbances of pulmonary function |
| | (Contd. on page 4) |
