 <u>4.2 Most important symptoms</u> and effects, both acute and delayed

Information for doctor:

Nausea Coughing With reference to section 2 the formulation contains styrene in the indicated mass concentration range. Styrene fumes will preferably be incorporated by inhalation via respiratory tract, skin resorption is currently considered as an inferior way of incorporation. In case of inhalation styrene is absorbed in a 60-90% range. Distribution in organism occurs rapidly, the maximum blood concentration can be analyzed after one hour after incorporation. Styrene exposition affects skin, mucous membranes, and central nervous system (CNS). Acute damages / risks to health: In case of styrene poisoning mainly damages to and interactions with central

In case of styrene poisoning mainly damages to and interactions with central nervous system (CNS) arise. In concentration ranges above 200 ml/m3

Supply fresh air. If required, provide artificial respiration. Keep patient warm.

In case of unconsciousness place patient stably in side position for

Rinse opened eye for several minutes under running water. If symptoms persist,

	symptoms such as fatigue, nausea, imbalance and prolonged response tim
	are observed.
	Chronical health risks:
	Effects at central and peripheral nervous system and respiratory tract a evident in literature.
	Main health risks are:
	- prolonged response times
	<ul> <li>reduced cognitive performance, partial amnesia</li> <li>retardation of nervous impulse transition speed</li> </ul>
	- disturbances of pulmonary function
Hazards	Danger of impaired breathing.
	Skin contact with polyester and epoxy resin solutions as ingredient of t
	product should be avoided due to risks of skin irritations or allergic sl
	appearances. If occasional hand contact can not be avoided, protection glove
	proper protection ointments and protective agents generating a protective lag
	on the skin were applied.
4.3 Indication of any immediate	
medical attention and special	If awallowed apartric irrigation with added, activated parkers
treatment needed	If swallowed, gastric irrigation with added, activated carbon. If swallowed or in case of vomiting, danger of entering the lungs.
	If swallowed of in case of vorniting, danger of entering the langs.
<b>5.1 Extinguishing media</b> Suitable extinguishing agents:	CO2, powder or water spray. Fight larger fires with water spray or alcol
For opfoty recease upquitable	resistant foam.
For safety reasons unsuitable extinguishing agents:	Water with full jet
5.2 Special hazards arising from	
the substance or mixture	Formation of toxic gases is possible during heating or in case of fire.
	In case of fire, the following can be released:
	Carbon monoxide (CO)
	Under certain fire conditions, traces of other toxic gases cannot be excluded.
5.3 Advice for firefighters	
Protective equipment:	Wear self-contained respiratory protective device.
	Do not inhale explosion gases or combustion gases.
	Wear fully protective suit. Mount respiratory protective device.
	Dispose of fire debris and contaminated fire fighting water in accordance w
Additional information	
Additional information	official regulations
Additional information	official regulations. Collect contaminated fire fighting water separately. It must not enter the sewa

Additional inform	ation: The lists valid during the making were used as basis.
General protectiv measures:	Do not eat, drink, smoke or sniff while working. Use skin protection cream for skin protection. Clean skin thoroughly immediately after handling the product. Keep away from foodstuffs, beverages and feed. Immediately remove all soiled and contaminated clothing Wash hands before breaks and at the end of work. Do not inhale gases / fumes / aerosols.
Respiratory prote	Avoid contact with the eyes and skin. <u>ection:</u> Short term filter device: Filter A/P2 In case of brief exposure or low pollution use respiratory filter device. In case intensive or longer exposure use self-contained respiratory protective device.
Protection of han	After use of gloves apply skin-cleaning agents and skin cosmetics. Preventive skin protection by use of skin-protecting agents is recommended.
	The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. Due to missing tests no recommendation to the glove material can given for the product/ the preparation/ the chemical mixture. Selection of the glove material on consideration of the penetrative times, rates of diffusion and the degradation Skin protection agent recommendation for preventive skin shell without use of protective gloves: ARRETIL (http://www.stoko.com) Skin protection agent recommendation for preventive skin shelter application and combination of protective gloves: STOKO EMULSION (http://www.stoko.com) Skin protection recommendation for skin cleaning after product handling: Kresto Classic (http://debstoko.com) Skin protection agent recommendation for skin aftercare: STOKO VITAN (http://www.stoko.com) The protection gloves to be used have to comply with the specifications of the directive 89/686/EC and the directive derive decree EN374, respectively, e.g. the above listed protection glo type. The mentioned permeation times' data were generated a verified with material samples of the recommended protection glo type in the scope of laboratory anylyses of the company KCL Gmbbr compliance with EN374.

Revision: 04.03.2020

### Trade name: Marble Filler 1000 Transparent L-Special waterclear

• <u>Material of gloves</u>	(Contd. of page 7) This recommendation refers exclusively to the material safety data sheet referenced product delivered by Akemi and the indicated field of application. In case of product dilution or in case of mixture with different substances or chemicals, and in condition of EN374 deviation the producer of CE-approved protection gloves must be contacted for detailed information (e.g., KCL GmbH, Germany, 36124 Eichenzell, internet: http://www.kcl.de). Fluorocarbon rubber (Viton) The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked
Penetration time of glove material	prior to the application. Value for the permeation: Level $\leq$ 6, 480 min The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.
<ul> <li>For the permanent contact gloves</li> </ul>	
made of the following materials are	
suitable:	Fluorocarbon rubber (Viton) Vitoject (KCL, Art_No. 890)
<ul> <li>As protection from splashes gloves</li> </ul>	
made of the following materials are	
suitable:	Fluorocarbon rubber (Viton)
	Vitoject (KCL, Art_No. 890)
	Nitrile rubber, NBR
Net a Makla and the second of	Camatril (KCL, 730, 731, 732, 733)
Not suitable are gloves made of	Natural with an ND
the following materials:	Natural rubber, NR
	Chloroprene rubber, CR
	Leather gloves Strong material gloves
Eye protection:	Stiong material gloves
	Tightly sealed goggles
Body protection:	Protective work clothing
